

Seraphi Bot — Command Guide

PLAYER COMMANDS

These commands are available for regular players.

Player Setup

/addplayer

Creates your player in Seraphi's database.

Variables:

- name — Your player/name.
- character — Your character's name.
- background — Your character's background.
- class_type — Your character's class.
- item — Optional item to add to your normal inventory.

Example:

```
/addplayer name:Andrew character:Steve background:mechanic class_type:rogue
```

Credits & Inventory

/getcredits

Shows your current credit balance.

Variables:

- username — Your Discord username.
-

/getitems

Shows your current inventory, including normal and magical items in alphabetical order.

Variables:

- username — Your Discord username.
-

/buyitem

Purchases an item from the shop using your credits.

Variables:

- item — The name of the shop item you want to purchase.

Example:

/buyitem item:laser rifle

/getitemprice

Check the price of an item in the shop.

Variables:

- item — The name of the item you want to check.

Example:

/getitemprice item:laser rifle

Table Commands

/gettable

Shows the players currently assigned to your table.

Variables:

- None.

The bot determines your table automatically based on the Discord category where the command is used.

/gettablemoney

Shows the amount of money currently stored as loot for your table.

Variables:

- None.
-

/gettableitem

Shows the loot items currently available at your table.

Variables:

- None.
-

/claimtableitem

Claims an available loot item.

Variables:

- item_name — The name of the loot item you want to claim.

Example:

```
/claimtableitem item_name:test 1
```

Bidding**/bid**

Places or changes your bid on a loot item.

Variables:

- item_name — The loot item you want to bid on.
- amount — The number of bids you want to place on that item.

Example:

```
/bid item_name:laser rifle amount:3
```

To undo bids just submit a new bid for that item you actually want.

DM / ADMIN COMMANDS

These commands are available to DMs and/or Administrators.

Player Management

/addplayer

Creates a new player in the database.

Variables:

- name — The player's name.
- character — The player's character name.
- background — The player's background.
- class_type — The player's class.
- item — Optional item to add to the player's normal inventory.

Example:

```
/addplayer name:Mike character:Steve background:soldier class_type:fighter
```

/deleteplayer

Deletes a player from the database.

Variables:

- username — The Discord username of the player to delete.
-

/listplayers

Lists all registered players.

Variables:

- None.

The command displays:

- Discord username

- Player name
- Character name

The results are **ephemeral**, meaning only the person who used the command can see them.

Credit Management

/addcredits

Adds credits to a player's account.

Variables:

- username — The Discord username of the player receiving the credits.
- amount — The number of credits to add.

Example:

```
/addcredits username:mike amount:500
```

/removecredits

Removes credits from a player's account.

Variables:

- username — The Discord username of the player losing the credits.
- amount — The number of credits to remove.

Example:

```
/removecredits username:mike amount:500
```

/getcredits

Checks a player's credit balance.

Variables:

- username — The Discord username of the player whose credits you want to check.

Item Management

/additem

Adds a normal item directly to a player's inventory.

Variables:

- username — The Discord username of the player receiving the item.
 - item — The item being added.
-

/addmagicitem

Adds a magical item directly to a player's magic inventory.

Variables:

- username — The Discord username of the player receiving the item.
 - item — The magical item being added.
-

/removeitem

Removes an item from a player's inventory.

Variables:

- username — The Discord username of the player losing the item.
 - item — The item being removed.
 - amount — The number of copies to remove, if applicable.
-

/getitems

Shows a player's inventory in alphabetical order.

Variables:

- username — The Discord username of the player whose inventory you want to check.

Shop Management

/additemtoshop

Adds an item to the shop.

Variables:

- item — The name of the item being added.
- Additional variables may be required depending on how your command is configured.

/addshopitem

Adds an existing shop item directly to a player's inventory **without charging the player**.

Variables:

- username — The Discord username of the player receiving the item.
- item — The name of the existing shop item being given to the player.

Example:

```
/addshopitem username:mike item:laser rifle
```

What it does:

- Adds normal items to the player's normal inventory.
- Adds magical items to the player's magic inventory.
- If the item is a container, its contents are added to the appropriate inventories.
- Does **not** deduct credits from the player.

/getitemprice

Checks the price of an item in the shop.

Variables:

- item — The name of the shop item.

Table Management

/addtable

Adds a player to the table associated with the current Discord category.

Variables:

- username — The Discord username of the player being added.

The bot determines the table automatically from the Discord category.

Current table categories:

- Hailey's Table
- Alijah's Table
- Spencer's Table
- Joseph's Table
- Rotation Table

/removetable

Removes a player from their current table.

Variables:

- username — The Discord username of the player being removed.

/cleartableplayers

Removes all players from the current table.

Variables:

- None.

/gettable

Shows all players currently assigned to the current table.

Variables:

- None.
-

Table Money**/settablemoney**

Sets the amount of money stored in the current table's loot.

Variables:

- amount — The amount of credits to put into the table's loot pool.

Example:

/settablemoney amount:5000

/resettablemoney

Resets the current table's stored loot money to zero.

Variables:

- None.
-

/gettablemoney

Shows the amount of money currently stored in the table's loot.

Variables:

- None.
-

Table Items**/addtableitem**

Adds an item to the current table's loot.

Variables:

- item — The name of the loot item.

- description — The description of the item.
- magic — Determines whether the item is magical.

To add the same item multiple times, input the item again.

/removetableitem

Removes an item from the current table's loot.

Variables:

- item — The name of the loot item to remove.
-

/cleartableitem

Clears the current table's loot items.

Variables:

- None.
-

/gettableitem

Shows the current table's available loot items.

Variables:

- None.
-

Loot & Bidding

/presenttableloot

Presents the current table's loot and activates bidding.

Variables:

- None.

The bot automatically determines the table from the Discord category.

/claimtableitem

Allows a player to claim an available loot item.

Variables:

- item_name — The name of the item the player wants to claim.
-

/bid

Allows players to place bids on loot.

Variables:

- item_name — The item being bid on.
- amount — The number of bids being placed.

The cost of bids is determined by the player's level.

/stopbid

Stops bidding on the current table.

Variables:

- None.
-

/finalizebids

Ends the bidding process and distributes the table's remaining loot.

Variables:

- None.

The command handles:

- Resolving bids.
- Awarding items to winners.
- Returning unused bid credits.
- Adding awarded items to player inventories.

- Distributing remaining unclaimed items.
 - Distributing table money.
 - Ending the bidding session.
-

How /finalizebids Distributes Items

When /finalizebids is used, Seraphi distributes the table's loot in the following order:

1. Claimed items are distributed first.

- Any item that a player already claimed is added directly to that player's inventory.
- **Magic items** go into their magic inventory.
- **Normal items** go into their normal inventory.

2. Items with bids are then resolved.

- The bot looks at the item's bid pool.
- A random bidder is selected from the bid pool.
- Players who placed more bids have more entries in the pool and therefore have a higher chance of winning.
- The winning player receives the item.
- Their bids for that item are removed from their total bid count.

3. The winner's first bid is free.

- If this is the first item that player has won during the finalization, their first bid is not charged.
- Any additional bids they used are charged according to their normal bid cost.

4. Losing bids are refunded.

- Players who bid on an item but did not win it get the credits spent on those bids returned.
- This prevents players from permanently losing credits on unsuccessful bids.

5. Items with no claims or bids are distributed evenly.

- The bot looks at how many items each player has received so far.
- It gives the next unclaimed item to one of the players with the **fewest items**.
- If multiple players are tied for the fewest items, one is selected randomly.
- This continues until all remaining items have been distributed.

6. **Table money is distributed.**

- The money stored in the table's loot pool is divided among the players at the table.
- Each player's share is added to their credits.

7. **The bidding session ends.**

- Once everything has been distributed, bid active is changed to false.

In short

Claims → Bids → Even distribution → Money → Bidding ends

Game Settings

/backupdata

Creates a backup of the player data in case we need to roll back the list.

Variables:

- None.

/setlevel

Sets a player's level.

Variables:

- username — The Discord username of the player.
- level — The player's new level.

Valid levels:

1–20

The player's level also determines their bid cost.

/setsession0

Turns Session 0 on or off.

Variables:

- enabled — Determines whether Session 0 is enabled.

Options:

- true — Session 0 is ON.
 - false — Session 0 is OFF.
-

Other

/greeting

Makes Seraphi send the group greeting.

Variables:

- None.

Message:

Meowdy!! Its good to see everyone! I'm here to help!

QUICK REFERENCE

Player Commands

Command	Purpose
/addplayer	Create your player
/getcredits	Check your credits
/getitems	Check your inventory

/buyitem	Buy an item
/getitemprice	Check an item's price
/gettable	View your table's players
/gettablemoney	View table loot money
/gettableitem	View table loot
/claimtableitem	Claim a loot item
/bid	Place a bid
/stopbid	Stop bidding

DM / Admin Commands

Command	Purpose
/addplayer	Create a player
/deleteplayer	Delete a player
/listplayers	List all players
/addcredits	Add player credits
/removecredits	Remove player credits
/getcredits	Check player credits
/additem	Give a normal item
/addmagicitem	Give a magic item

/removeitem	Remove an item
/getitems	View player inventory
/additemtoshop	Add an item to the shop
/addshopitem	Give a shop item to a player
/getitemprice	Check shop price
/addtable	Add player to a table
/removetable	Remove player from a table
/cleartableplayers	Clear table players
/gettable	View table players
/settablemoney	Set table money
/resettablemoney	Reset table money
/gettablemoney	View table money
/addtableitem	Add table loot
/removetableitem	Remove table loot
/cleartableitem	Clear table loot
/gettableitem	View table loot
/presenttableloot	Start loot presentation
/claimtableitem	Claim loot

/bid	Place a bid
/stopbid	Stop bidding
/finalizebids	Finalize and distribute loot
/setlevel	Set player level
/setsession0	Toggle Session 0
/greeting	Send the group greeting
